Trust Objective

To provide growth in income and capital to achieve a long-term total return greater than the benchmark FTSE All-Share Index, through investment primarily in UK securities. The Company's policy is to invest in a broad spread of securities with typically the majority of the portfolio selected from the constituents of the FTSE 350 Index.

Performance, Price and Yield information is sourced from Morningstar as at 30.11.2020

Past performance should not be taken as a guide to the future and dividend growth is not guaranteed. The value of your shares in Temple Bar and the income from them can fall as well as rise and you may lose money. This Trust may not be appropriate for investors who plan to withdraw their money within the short to medium term.

Risks

Borrowing/leverage risk

The Company can borrow additional money to invest, known as leverage. This increases the exposure of the Company to markets above and beyond its total net asset value. This can help to increase the rate of growth of the fund but also cause losses to be magnified.

Charges to capital risk

A portion (60%) of the Company's expenses are charged to its capital account rather than to its income, which has the effect of increasing income (which may be taxable) whilst reducing its capital to an equivalent extent. This could constrain future capital and income growth.

Company share price risk

The Company's share price is determined by supply and demand for such shares in the market as well as the net asset value per share. The share price can therefore fluctuate and may represent a discount or premium to the net asset value per share. This can mean that the price of an ordinary share can move independently to the net asset value.

Interest rate

The value of fixed income investments (e.g. bonds) tends to decrease when interest rates and/or inflation rises.

Equity investment

The value of equities (e.g. shares) and equity-related investments may vary according to company profits and future prospects as well as more general market factors. In the event of a company default (e.g. insolvency), the owners of their equity rank last in terms of any financial payment from that company.

The effect of borrowings to finance the Trust's investments is to magnify the volatility of its price and potential capital gains and losses. We recommend that you seek independent financial advice to ensure this Trust is suitable for your investment needs.
